INTRODUCTION

The SB-5669K is professional 16x16 matrix routing switch. Supporting (16) HDMI Inputs and (16) HDMI outputs. The SB-5669K is based on the HDMI standard and supports full resolution HDMI video with embedded HDCP, RS-232 and bi-directional IR, all over a single HDMI cable. With a signal bandwidth of 340Mhz, there is no signal degradation. High definition digital signals can be selected and distributed to any of the (16) Inputs to the (16) Outputs. The SB-5669K is certified as being fully CEC and HDCP 1.3 compliant with HDMI 1.4a, HDMI 4K2K@30Hz, DVI 1.0 and 3D formats and a wide frequency range of 25MHz~340MHz. Supports UXGA/ WUXGA/DVI 1920x1200 resolution to any HD display. EDID management can be selected between (7) different modes. Control is provided via front panel push buttons, IR remote, RS-232 or TCP/IP (not a web-browser). A RS-232 Windows GUI interface is provided for matrix routing control (Windows only).

The SB-5669K's front panel includes a large LCD display which shows the current routing cross points of all Inputs to Outputs and it allows for easy setup of EDID modes. Functional manual control is achieved through push buttons located on the front panel. External functional control is achieved through RS-232 Serial connection, IR Remote Control or IP. The RS-232/ IP connection allows functions to be controlled by systems like Control4® (drivers included) or any computerized software/hardware control system. The IP (Ethernet) port supports commands from a device when using either our provided PC GUI software or thru 3rd party emulator to an IP address set in the SB-5669K. The IP port does not have a built in web-server.

When using the SB-5669K Matrix Routing Switch, one-to-many or many-to-one connections can be established. You can easily connect any input device to any output device. You can also establish a single input device to many output devices, eliminating the need to constantly re-route video input and output cables.
